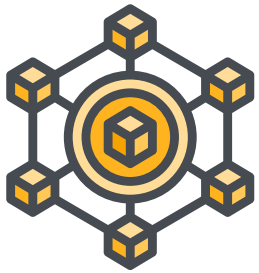
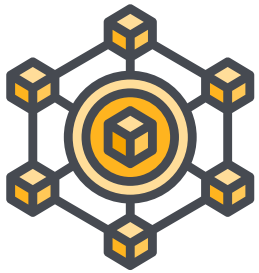
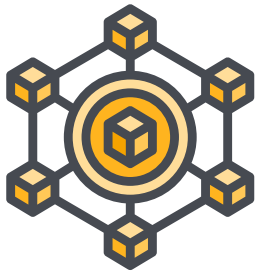
🧩 What is Thirdweb?



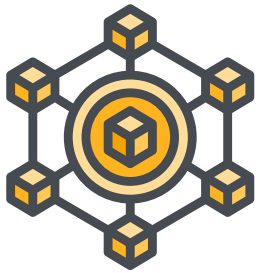
- A Web3 development platform that helps developers build blockchain applications easily
- Provides tools to deploy and manage smart contracts
- Offers SDKs, APIs, and prebuilt contracts for faster development
- Designed for developers building dApps, NFTs, tokens, and Web3 apps.



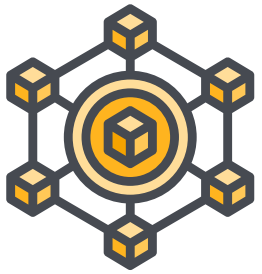
Why Do We Need Thirdweb?



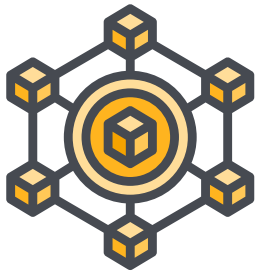
- Building Web3 apps from scratch is complex and time-consuming
- Smart contracts require deep blockchain knowledge
- Developers need infrastructure for wallets, storage, and blockchain interaction
- Thirdweb simplifies development and reduces development time.



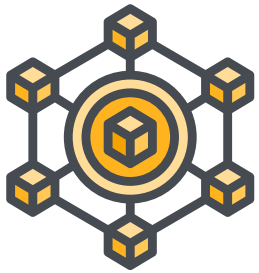
⚡ Key Features of Thirdweb



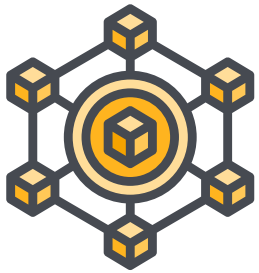
- Prebuilt Smart Contracts – ready-to-use contracts for NFTs, tokens, marketplaces
- Developer SDKs – easy integration with frontend apps
- Dashboard – deploy and manage contracts visually
- Wallet Integration – connect users with crypto wallets
- Decentralized Storage – store metadata and assets.



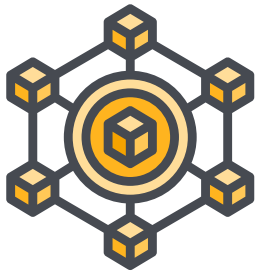
⚙️ How Thirdweb Works



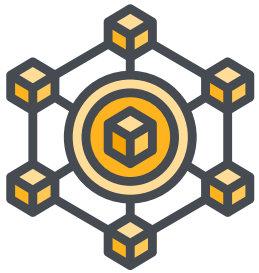
- Connect your crypto wallet
- Deploy smart contracts using the dashboard
- Use SDKs or APIs to interact with contracts
- Connect your frontend application
- Your app interacts directly with the blockchain network



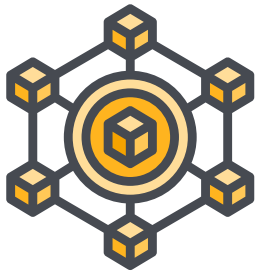
Supported Blockchains



- Thirdweb supports multiple EVM compatible blockchains:
- Ethereum
- Polygon
- Arbitrum
- Optimism
- This allows developers to build scalable and cost-efficient Web3 applications.



Typical Thirdweb Developer Workflow



- Connect wallet
- Deploy smart contract
- Configure contract settings
- Integrate Thirdweb SDK into frontend
- Users interact with blockchain through the app
